Continuation of 3. NOTE: The claims as now amended introduce limitations not previously presented during prosecution (i.e., composition is sprayable in a non-aerosol device) and thus, change the scope of the originally-filed claims, requiring further consideration and/or search.

Continuation of 11. does NOT place the application in condition for allowance because: Applicant's argument that "Jose does not disclose use of a coprocessed product or its use in a sprayable composition" was not persuasive. Jose teaches ingredients as disclosed by Applicant, such as microcrystalline cellulose (MCC) as a particulate material and ingredients such as titanium dioxide and calcium carbonate and mixtures thereof. The reference teaches the MCC as a performance-enhancing ingredient (i.e.,rheology enhancer). No unexpected results have been attributed based on the "coprocessed" MCC claimed by Applicant. Examiner further maintains the position that the term "sprayable" denotes a future-intended use limitation, with respect to administration or application of the composition. Applicant's argument stating that "Pflucker does nto disclose a rheology control agent comprising MCC coprocessed with carboxymethylcellulose" was not persuasive. Pflucker teaches inorganic sunscreen agents (zinc, titanium dioxide), which reads on the attriting agents instantly claimed. Pflucker further discloses MCC in combination with additional processing agents and thus meets the requirement for "coprocessed" MCC. Applicant's arguments regarding Tanner in view of '706 were not persuasive. The references in combination teach MCC in combination with processing agents and thus, read on the limitations as presently claimed. Applicant's arguments relating to the Declaration under 37 CFR 1.132 have not been considered (see box #8 above). Further for the reasons advanced in the Final Office Action (filed 02/03/10), Applicant's arguments were not deemed persuasive.
